

Smart 4 house Temperature Sensor/monitor

Temperature Sensor The S4H-TM-00 temperature sensor is fitted with an internal and external probe and with a 2m long cable. The sensor can be used as a simple temperature probe or as a thermostat with two adjustable temperature limits. Information about temperature is sent from the sensor to the cloud via Wi-Fi and the home AP at 15-min, 30-min, 1-hour, 2-hour or 4-hour intervals. In the thermostat mode, **notifications are sent outside of the selected time intervals when the temperature falls below or exceeds the preset limit.** Information is sent to your smartphone, where you can display it using the Smart4house application as a numeric value or in the form of a diagram. You can use your smartphone to set or change the display mode, message sending intervals or monitored temperature limits. No monthly or yearly charge for reports or alerts.
